

Transgenic expression cassettes for expressing nucleic acids in the flower of plants

5 Abstract

The invention relates to methods for the targeted transgenic expression of nucleic acid sequences in the flower of plants, and  
10 to transgenic expression cassettes and expression vectors which comprise promoters having an expression specificity for the flower of plants. The invention further relates to organisms (preferably plants) transformed with these transgenic expression cassettes or expression vectors, to cultures, parts or  
15 propagation material derived therefrom, and to the use of the same for producing human and animal foods, seeds, pharmaceuticals or fine chemicals.
